 TRACTORES Y MAQUINARIA

Las referencias de las baterías pueden cambiar dependiendo del origen de ensamble y modelo del vehículo. *Es necesario verificar el habitáculo del motor para garantizar una adecuada instalación.*

Los vehículos a los que se les aplica la batería del grupo NS40, se debe verificar el diámetro del conector para determinar si la batería requiere el buje o aditamento para convertirla a borne estándar.

Vehículos a los que se les haya realizado conversión a gas es necesario aplicar una batería de más capacidad (20%) a la recomendada en este catálogo.
